

PolyOne Plasticizer Products

Spill & First Aid Instructions

First Aid

Inhalation

Remove individual(s) to fresh air. Contact a physician.

Eye Contact

Flush eyes with water for at least 15 minutes. Seek immediate medical attention.

Skin Contact

Wash with soap and water.

Ingestion

Do not induce vomiting. Seek medical attention if nausea develops.

Fires or Overheating During Processing

Water is the most effective extinguishing agent. ABC dry chemical, AFFF and protein foams are effective. Plasticizers are ordinary combustibles.

Plasticizers burn above temperatures of 200° C. If a plasticizer is involved in a fire, it can generate gases that are irritants to the eyes and respiratory system. Firefighters or other emergency personnel should use Self-Contained Breathing Apparatus and full turnout gear when in the presence of smoke or vapors from a fire or overheating condition. If closed containers are involved in a fire, they may explode due to increased internal pressure.

Spills or Leaks

Plasticizers, if spilled, should be covered with an inert absorbent material and swept and put into a clean, properly labeled container for disposal. Plasticizers are not classified as hazardous waste. They should be disposed of in accordance with federal, state, provincial and local regulations.

Special Precautions

Do not reuse plasticizer containers for other purposes.
