3M Scotch-Weld[™] Epoxy Adhesives DP-105 Clear

Item # 99478

Technical Data

June, 2002

Product Description

3MTM Scotch-WeldTM Epoxy Adhesive DP-105 Clear is available in larger containers like 3MTM Scotch-WeldTM Epoxy Adhesive 105 B/A Clear.

Scotch-Weld DP-105 Clear is a fast setting, very flexible 1:1 mix ratio epoxy adhesive/sealant. Its flexibility when cured makes it ideal for applications involving dissimilar surfaces where thermal coefficient of expansion may be a problem. It is also unique in that it retains its clear, colorless properties even when cured in larger masses where many clear epoxy systems will often turn amber from the reaction exotherm.

Features

- · 4 minute worklife
- High peel strength

Flexible

• 1:1 mix ratio

Clear

Typical Uncured Physical Properties

Note: The following technical information and data should be considered representative or typical only and should not be used for specification purposes.

Footnotes:

- Viscosity determined using 3M test method C-1d. Procedure Involves Brockfield RVF, #7 spindle, 20 rpm and 80°F (27°C). Measurement taken after 1 minute rotation.

Product		Scotch-Weld DP-105 Clear
Base Resins		Epoxy/Mercaptan
Color	Base (B) Accelerator (A)	Ciear Clear

Workiffe ² @ 73°F (23°C)	2 gram 20 gram	5 mínutes 4 minutes

Scotch-Weld[™] Epoxy Adhesives DP-105 Clear

Typical Cured Properties

Footnotes:

- Worldife determined using 3M test method C-3180. Procedure involves periodically measuring a 2 gram mixed mass for self-leveling and welling properties. This time will also exproximate the usable worktile in an EPX mixing nozzle.
- Tack-free determined per 3M test method C-3175. Involves dispensing 0.5 gram amount of adhesive onto substrate and testing periodically for no adhetive transfer to metal seatule.
- Handling strength determined per 3M test method C-3179. Time to handling strength taken to be that required to echieve a 50 psi OLS strength using atuminum substrates.
- The cure time is defined as that time required for the adhesive to achieve a minimum of 80% of the ullimate strength as measured by aluminum-atuminum OLS.
- Tonsile and Eiongation. Used procedure in 3M lest method C-3094/ASTM D 682. Samples were 2" dumbbells with .0125" neck and .030" sample thickness. Separation rate was 2 inches par minute. Samples cured 2 hrs RT plus 2 hrs/160°F (71°C).
- Weight loss by TGA reported as that temperature at which 5% weight loss occurs by TGA in air at 5°C (4°F) rise per minute per ASTM 1131-86.
- TCE determined using Duponi TMA Analyzer using a heating rate of 50°F (10°C) per minute. Second heat values given.
- Glass Transition Temperature (Tg) determined using Parkin Elmer DSC Analyzer with a heating rate of 88°F (20°C) per minute. Second heat values given.
- Thermel conductivity determined using ASTM C177 and C-malic Instrument using 2 inch diameter semples.
- Thermal shock resistance run per 3M test method C-3174. Involves potting a metal washer into a 2" x 0.5" thick section and cycling this last specimen to colder and colder temperatures.

Note: The following technical information and data should be considered representative or typical only and should not be used for specification purposes.

	Scotch-Weld DP-105 Clear

Typical Adhesive Performance Characteristics

The following product performance data was obtained in the 3M laboratory under the conditions specified. The following data show typical results obtained with the 3MTM Scotch-WeldTM Adhesives when applied to properly prepared substrates, cured, and tested according to the specifications indicated. This data was generated using the 3MTM Scotch-WeldTM EPXTM Applicator System equipped with an EPX static mixer, according to manufacturer's directions. Thorough hand mixing should afford comparable results.

Note: The following technical information and data should be considered representative or typical only and should not be used for specification purposes.

Faotnoles:

12. Overlap shear (OLS) strangths were measured on 1" wide 1/2" overlap specimens. These bonds were made individually using 1" x 4" pleces of substrate. The thickness of the bond line was 0.005-0.008". All strangths were measured at 70"F (21"C) except where noted. (Test per ASTM D 1002-72.)

The separation rate of the testing jaws was 0.1° per minute for metals, 2° per minute for plastice and 20° per minute for rubbers. The thickness of the substrates were: steel, 0,050°; other metals, 0.05-0.064°; rubber, 0.125°; plastics, 0.125°.

	Scotch-Weld DP-105 Clear
Overlap Shear (OLS) to ¹² (Bonds aged 24 hrs @ RT + 2 hrs @ 160°F (71°C)	
Etched Aluminum	2000 psi
Sanded Aluminum (60 grit)	1500 psi
Cold Rolled Steel	1300 psi
Wood, Fir	300 psi
Glass, Borosilicate	200 psi
Glass, +3M 3901 Primer	250 psi
Polycarbonate	400 psi
Acrylic	250 psi
Fibarglass	1400 psi
ABS	300 psi
PVC	520 psi
Polypropylene	80 psi

Rate of Strength Bulldup (OLS on Etched Aluminum) ¹² Bonds tested after:	
1 hr @ RT	250 psi
6 hrs @ RT	500 psi
24 hrs @ RT	1000 psi
7 days @ RT	2000 psi
1 ma @RT	2000 psi

Environmental Aging (OLS on Etched Aluminum) ¹² Bonds tested after:	
24 hrs RT + 2 hrs @ 160°F (71°C)	2000 psi
24 hrs RT + 2 hrs @ 240°F (116°C)	2200 psi
1 wk RT + 1 wk @ 90°F/90% RH	1800 psi
1 wk RT + 1 wk 248°F (120°C)	3000 psl
1 wk RT + 1 wk H ₂ O Immersion	2000 psi

Typical Adhesive Performance Characteristics (continued)

Footnotes:

 Overlap shear (OLS) strengths were measured on 1" wide 1/2" contap specimen. These bonds were made Individually using 1" x 4" pieces of substrate. The bibliness of the bond line was 0.005-0.008". All strengths were measured at 70"F (21"C) except where noted. (Test per ASTM D 1002-72.)

The separation rate of the testing jaws was 0.1° per minute for metels, 2° per minute for pleatice and 20° per minute for nubbers. The thickness of the substrates were: eleel, 0.060°; other metals, 0.05-0.084°; rubber, 0.125°; plastics, 0.125°.

- 13. T-peel strengths were measured on 1" wide bonds at 73"F (23"C). The lessing law separation rate was 20 inches per minute. The substrates were 0.020" thick. (Testa per ASTM D 1876-61T).
- 14. Solvent resistance was determined using cured (24 hrs RT + 2hrs 160°F (71°C)) samples (1/2" x 4" x 1/8" thickness) immersed in the test solvent for 1 hours and 1 month. After the allotted period of time the sample was removed and visually examined for surface attack as compared to the control.
 - Key: A Unaffected no change to color or surface texture.
 - B Slight attack noticeable swelling of surface. C - Moderate/severe attack -
 - c moderniesevere stack extreme swelling of surface.
- 15. Exotherm determined using the stated mass inbed for 1 minute and then by electronic thermocouple measuring the peak temperature and time to that temperature.

Note: The following technical information and data should be considered representative or typical only and should not be used for specification purposes.

	Scotch-Weld DP-105 Clear
Overlap Shear Strength vs Temperature ¹² (Bonds cured 24 hr @ RT + 2 hrs @ 160°F [71°C]) Bonds tested at:	
-67°F (-53°C)	3500 psi

2 gram mass	98°F (37°C)/5 min.
20 gram mass	230°F (110°C)/3 mln.

Handling/Curing Information

Directions for Use

- For high strength structural bonds, paint, oxide films, oils, dust, mold release agents
 and all other surface contaminants must be completely removed. However, the
 amount of surface preparation directly depends on the required bond strength and
 the environmental aging resistance desired by user. For specific surface preparations
 on common substrates, see the following section on Surface Preparation.
- 2. Uses gloves to minimize skin contact. Do not use solvents for cleaning hands.
- 3. Mixing

For Duo-Pak Cartridges

3MTM Scotch-WeldTM Epoxy Adhesive DP-105 Clear is supplied in a dual syringe plastic Duo-Pak cartridge as part of the 3MTM Scotch-WeldTM EPXTM Applicator system. To use, simply insert the Duo-Pak cartridge into the EPX applicator and start the plunger into the cylinders using light pressure on the trigger. Next, remove the Duo-Pak cartridge cap and expel a small amount of adhesive to be sure both sides of the Duo-Pak cartridge are flowing evenly and freely. If automatic mixing of Part A and Part B is desired, attach the EPX mixing nozzle to the Duo-Pak cartridge and begin dispensing the adhesives. For hand mixing, expel the desired amount of adhesive and mix thoroughly. Mix approximately 15 seconds after uniform color is obtained.

For Bulk Containers

Mix thoroughly by weight or volume in the proportions specified in the Typical Uncured Properties section. Mix approximately 15 seconds after uniform color is obtained.

- 4. For maximum bond strength apply adhesive evenly to both surfaces to be joined.
- 5. Application to the substrates should be made within 3 minutes. Larger quantities and/or higher temperatures will reduce this working time.
- Join the adhesive coated surfaces and allow to cure at 60°F (16°C) or above until completely firm. Heat up to 200°F (93°C), will speed curing. These products will cure in 48 hours @ 75°F (24°C).
- Keep parts from moving during cure. Contact pressure is necessary, Maximum shear strength is obtained with a 3-5 mil bond line.
- 8. Excess uncured adhesive can be cleaned up with ketone type solvents.*

Adhesive Coverage: A 0.005 in. thick bondline will yield a coverage of 320 sq. ft./gallon.

*Note: When using solvents, extinguish all ignition sources and follow the manufacturer's precautions and directions for use.

Surface Preparation

For high strength structural bonds, paint, oxide films, oils, dust, mold release agents and all other surface contaminants must be completely removed. However, the amount of surface preparation directly depends on the required bond strength and the environmental aging resistance desired by the user.

The following cleaning methods are suggested for common surfaces:

Steel:

- 1. Wipe free of dust with oil-free solvent such as acetone, isopropyl or alcohol solvents.*
- 2. Sandblast or abrade using clean fine grit abrasives.
- 3. Wipe again with solvent to remove loose particles.
- 4. If a primer is used, it should be applied within 4 hours after surface preparation. If 3MTM Scotch-WeldTM Structural Primer 1945 B/A is used, apply a thin coating (0.5 mils) on the metal surfaces to be bonded, air dry for 10 minutes, then cure for 30 minutes at 180°F (82°C) prior to bonding.

Aluminum:

- 1. Vapor Degrease: Perchlorethylene condensing vapors for 5-10 minutes.
- Alkaline Degrease: Oakite 164 solution (9-11 oz./gallon water) at 190°F ± 10°F (88°C ± 5°C) for 10-20 minutes. Rinse immediately in large quantities of cold running water.
- Acid Etch: Place panels in the following solution for 10 minutes at 150°F ± 5°F (66°C ± 2°C).

Sodium Dichromate
Sulfuric Acid, 66°Be
2024-T3 aluminum (dissolved)
Tap Water as needed to balance

4.1 - 4.9 oz./gallon 38.5 - 41.5 oz./gallon 0.2 oz./gallon minimum

- 4. Rinse: Rinse panels in clean running tap water.
- 5. Dry: Air dry 15 minutes; force dry 10 minutes at $150^{\circ}\text{F} \pm 10^{\circ}\text{F}$ ($66^{\circ}\text{C} \pm 5^{\circ}\text{C}$).
- 6. If primer is to be used, it should be applied within 4 hours after surface preparation.

Plastics/Rubber:

- Wipe with isopropyl alcohol.*
- 2. Abrade using fine grit abrasives.
- 3. Wipe with isopropyl alcohol.*

Glass

- 1. Solvent wipe surface using acetone or MEK.*
- Apply a thin coating (0.0001 in. or less) of primer such as 3M[™] Scotch-Weld[™] Primer EC-3901 to the glass surfaces to be bonded and allow the primer to dry before bonding.

*Note: When using solvents, extinguish all ignition sources and follow the manufacturer's precautions and directions for use.

Surface Preparation (continued)

- For small or intermittent applications the 3M[™] Scotch-Weld[™] EPX[™] Applicator is a convenient method of application.
- For larger applications, these products may be applied by use of flow equipment.
- Two part meter/mixing/dispensing equipment is available for intermittent or production line use. These systems may be desirable because of their variable shot size and flow rate characteristics and are adaptable to many applications.

Store 3MTM Scotch-WeldTM Epoxy Adhesive DP-105 Clear at 60-80°F (15-27°C) for maximum shelf life. These epoxy adhesive products have a shelf life of 2 years in their unopened containers and 15 months in Duo-Pak containers.

Precautionary Information

Refer to Product Label and Material Safety Data Sheet for health and safety information before using this product. For additional health and safety information, call 1-800-364-3577 or (651) 737-6501.

For Additional Information

To request additional product information or to arrange for sales assistance, call toll free 1-800-362-3550 or visit www,3M.com/adhesives. Important Notice

3M MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. User is responsible for determining whether the 3M product is fit for a particular purpose and suitable for user's method of application. Please remember that many factors can affect the use and performance of a 3M product in a particular application. The materials to be bonded with the product, the surface preparation of those materials, the product selected for use, the conditions in which the product is used, and the time and environmental conditions in which the product is expected to perform are among the many factors that can affect the use and performance of a 3M product. Given the variety of factors that can affect the use and performance of a 3M product, some of which are uniquely within the user's knowledge and control, it is essential that the user evaluate the 3M product to determine whether it is fit for a particular purpose and sultable for the user's method of application.

Limitation of Remedies and Liability

If the 3M product is proved to be defective, THE EXCLUSIVE REMEDY, AT 3M'S OPTION, SHALL BE TO REFUND THE PURCHASE PRICE OF OR TO REPAIR OR REPLACE THE DEFECTIVE 3M PRODUCT. 3M shall not otherwise be liable for loss or demages, whether direct, indirect, special, incidental, or consequential, regardless of the legal theory asserted, including, but not limited to, contract, negligence, warranty, or strict liability.

This Engineered Adhasives Division product was manufactured under a 3M quality system registered to ISO 9002 standards.
